UNIVERSAL LICENSE PLATE ATTACHMENT SYSTEM

ABSTRACT OF THE DISCLOSURE

A universal attachment system for attaching to a motor vehicle the license plate from a number of countries, even though the locations of the attachment holes of the license plates may be different from country to country. A right nut body has a first plurality of license plate attachment holes, a left nut body has a second plurality of license plate attachment holes, and an attachment panel which carries the left and right nut bodies. The first and second pluralities of license plate attachment holes provides a plurality of pairs of license plate attachment holes for aligning with the license plate mounting holes of any, or all, of a North American, Japanese, Korean, Persian Gulf States and European license plate
